PROFESSIONAL SUMMARY

Frontend Engineer with roughly 8 years of experience in software development, with a solid track record in building scalable architectures and Micro-frontend (MFE) ecosystems, and in modernizing highly complex legacy platforms. I have strong experience in the financial sector, with around 2 years combined across three client-based consulting roles for Santander, Pan, and Itaú, and more recent experience in the automotive sector, on the global BMW MyAccount platform (act digital), where I worked for about 5 months in a bilingual international environment (Portuguese-English), with daily technical communication in English alongside international teams. My focus areas are web performance optimization, code governance, shared library creation, and automated CI/CD pipeline structuring, integrated with AWS cloud services. Beyond the technical scope, I lead onboarding processes and mentor engineers, and I have experience diagnosing and quickly resolving critical production failures.

TECHNICAL SKILLS

- **Frontend & Core:** Angular (2+ up to 20), AngularJS, TypeScript, JavaScript (ES6+), RxJS, NgRx (Redux pattern for Angular), State Management, HTML5, CSS3/SCSS, Angular Material, Web Accessibility (WCAG, ARIA).
- **Architecture & Governance:** Micro-frontends / microfrontends (MFE), Module Federation, Clean Architecture, Clean Code, SOLID, KISS, DRY, Single Page Applications (SPA), Code Review, Technical/Architectural Modeling.
- **Cloud & DevOps:** AWS (S3, CloudFront, Lambda, DynamoDB), Azure DevOps, Jenkins, GitHub Actions, GitLab CI, Docker, CI/CD Pipelines.
- **Backend & Databases:** .NET Core, .NET Framework, C#, ASP.NET MVC/Razor, REST APIs, Microservices, SQL Server, DynamoDB, Swagger.
- **Testing & Tools:** Karma, Jasmine, Vitest, Automated Testing, Postman, SonarQube, axe DevTools, Git, Jira, Confluence, ServiceNow, SAAFe Framework.

PROFESSIONAL EXPERIENCE

act digital | Frontend Engineer (Project: BMW - MyAccount)

November 2025 – April 2026

- Migrated monolithic modules from the global MyAccount platform to a microfrontend architecture using Angular 20 (Signals, updated Control Flow, @defer) and Module Federation (Webpack, @angular-architects/module-federation), cutting build time and isolating deployment scopes per microfrontend.
- Served as the most experienced developer on the team and took on senior-level responsibilities as de facto technical lead for an extended period with no formal tech lead, in a bilingual international environment with daily technical documentation and alignments in English.
- Developed features for the brand's global portal with a focus on accessibility (WCAG, ARIA, axe DevTools), contributing to the governance of the internal UI and Service libraries that integrated the microfrontends.
- Mapped and documented legacy modules with no technical record, using GitHub Copilot (Claude Sonnet). On my own initiative, I built and used an agent that automated this documentation, later making it available to the team; this work also surfaced duplicate, abandoned products within the platform.
- Fixed recurring memory leaks from RxJS subscriptions without unsubscribe/takeUntil, asymmetrically implemented route guards across microfrontends, and database integration/encoding bugs that were breaking the CI/CD pipeline.
Tools & technologies: Angular 20 (Signals, updated Control Flow, @defer), Module Federation (Webpack, @angular-architects/module-federation), microfrontend (MFE) architecture, internal UI and Service libraries (UI/Service Libs), accessibility (WCAG, ARIA, axe DevTools), database scripts and bugfixes (data/encoding), Vitest (early-stage adoption in newer platform modules), GitHub Copilot / Claude Sonnet, English-language technical/architectural documentation.

Numax | Frontend / Full-Stack Engineer

March 2024 – June 2025

- Led the complete migration from AngularJS to Angular 18, cutting the multitenant application's initial load time from roughly 1 minute 40 seconds to about 35 seconds and eliminating severe initial bundle overheads.
- Designed and configured end-to-end CI/CD pipelines via Azure DevOps, automating the deployment workflow to directly target AWS environments (S3 and CloudFront), ensuring continuous releases and automated cache invalidation with zero human intervention.
- Built dynamic components and reusable libraries to streamline the development flow of new internal system modules.
- Diagnosed and fixed a critical production issue that surfaced right after a version rollout, before validation in a test environment (CloudFront) was complete: a missing feature flag was preventing the login button from displaying. Restored functionality the same day.
- Developed and maintained enterprise web applications in Angular on an ongoing basis, applying Clean Code and SOLID/KISS/DRY principles in recurring refactors aimed at performance and maintainability.
Tools & technologies: Angular (AngularJS to Angular 18 migration, Standalone Components), Jenkins, Azure DevOps, AWS (S3, CloudFront), internal libraries and reusable components.

GFT Group | Frontend Developer, Level L3 (Project: Banco Santander - benAssist)

September 2022 – April 2023

- Designed modular and reusable UI components aligned with corporate design tokens for the benAssist platform, accelerating the feature delivery time of parallel agile squads.
- Trained and supported interns on the team and worked directly with management and the product team, taking on senior -level responsibilities on a day-to-day basis.
- Elevated stability and security metrics for internet banking, expanding automated unit test coverage with Karma and Jasmine a cross a broader scope of platform components.
- Integrated the frontend with RESTful APIs via HttpClient and RxJS, consuming the benAssist platform's backend services.
- Managed the Continuous Integration and Deployment (CI/CD) cycle using Jenkins and GitLab, applied static code quality analysis with SonarQube, and delivered work under agile methodologies (Kanban/Scrum/OKR) with Jira and Confluence.

Tools & technologies: Angular 2+, TypeScript, SCSS, RxJS, HttpClient, Karma, Jasmine, SonarQube, Postman, Jenkins, GitLab, Jira, Confluence, Kanban/Scrum/OKR methodologies.

Qintess | Frontend Developer (Project: Banco Pan - giropan)

March 2022 – September 2022

- Refactored asynchronous data flows and optimized global state management using NgRx in the giropan project, eliminating a memory leak caused by multiple nested RxJS subscriptions without proper management, and fixing concurrency failures in high-traffic dashboards.
- Conducted continuous refactoring focused on client-side rendering performance, implemented automated tests (Postman, Jasmine) integrated into Jenkins/Azure Git pipelines within Scrum/SAFe with static code analysis via SonarQube, and documented technical specifications in Confluence.

Tools & technologies: Angular 2+, NgRx, TypeScript, SCSS, Postman, Jasmine, SonarQube, Jenkins, Azure Git, Jira, Confluence, Kanban/Scrum/SAFe/OKR methodologies.

everis / NTT DATA Europe & Latam | Frontend / Fullstack Developer (Project: Banco Itaú - Hub Agro)

April 2021 – March 2022

- Implemented and maintained the Hub Agro corporate financial platform using Angular and RxJS, integrating the frontend with .NET Core-based backends.
- Took on responsibilities equivalent to a tech lead role, driving multiple workstreams independently, and coordinated the onboarding track for new engineers, shortening the ramp-up time needed before independently delivering code.
- Adopted the practice of keeping an isolated backup branch before integrating third-party changes; when a change corrupted the main repository and affected multiple teams, that branch was used to quickly restore the project, cutting what would have been a full day of recovery down to about 30 minutes.
- Delivered automated tests (Karma, Jasmine, Postman) and technical documentation in Confluence, working under Kanban/Scrum/OKR methodologies with task management in Jira and version control via GitLab.

Tools & technologies: Angular 2+, RxJS, TypeScript, SCSS, .NET Core, Karma, Jasmine, Postman, GitLab, Jira, Confluence, Kanban/Scrum/OKR methodologies.

Tecnologia Única | Fullstack Developer (career path from Intern/Junior to Mid-Level)

February 2018 – September 2020

- Created responsive interfaces using AngularJS and Angular 2+ and developed stable hybrid mobile applications using versions 3 and 4 of the Ionic framework, focused on improving rendering fluidity and performance on mobile devices.
- Structured secure RESTful APIs under a microservices model using .NET Core, C#, and Swagger, applying JWT token validation to support large volumes of concurrent requests.
- Configured data routines in web services with .NET Framework MVC and dynamic web pages with ASP.NET Razor (C#), connecting relational (SQL Server) and NoSQL (DynamoDB) databases, with documentation and version control via Git, TFS, and Bitbucket, and integration testing with Postman and Swagger.
- Diagnosed and fixed a critical bug in the application's password field, deploying the fix the same day.

Tools & technologies: .NET, .NET Core, .NET Framework (MVC), C#, ASP.NET Razor, Angular 2+, AngularJS, TypeScript, JavaScript, CSS/SCSS, Ionic 3 and 4, SQL Server, DynamoDB, Swagger, Postman, Git, TFS, Bitbucket, Kanban/Agile (TFS) methodologies.

EDUCATION

- **Postgraduate Degree, Frontend Engineering**, FIAP (August 2024 – July 2025)
- **Associate Degree, Systems Analysis and Development**, FIAP (January 2020 – December 2021)

ADDITIONAL TRAINING

- **Theater and Public Speaking Course**: interpersonal communication and presentation skills development, later applied to team mentoring and stakeholder alignment (August 2022 – March 2024)

LANGUAGES

- **English**: C1 (EF SET certified); fluent, effective communication in international corporate environments
- **Portuguese**: Native
